

Continuo organ

Small in size and lightweight. Nevertheless, big, colourful, mild and able to carry tones through their wooden pipework. Additional advantages are that they remain in tune (even when transported) and adjust quickly to temperature differences. Our continuo organs are easy to tune, without special tools (equal temperament, Werckmeister, meantone). A pull-out keyboard enables a comfortable sitting posture and a more pleasant touch. The shared stops can be operated with one hand (left). If necessary, the organ can be transported on its side. It is possible to add a pedalboard and a second keyboard. This will make it suitable as a practice organ.
